

Do you know your *BRCA* status?

Knowing your *BRCA* status could help find targeted treatments if you have or develop metastatic castration-resistant prostate cancer (mCRPC).

BRCA Mutations and Prostate Cancer

- When *BRCA* genes are mutated—or permanently changed—damaged DNA cannot be repaired properly
- Men who have a *BRCA* mutation are at a higher risk for developing prostate cancer
- Knowing if you have a *BRCA* mutation can inform targeted treatment decisions
